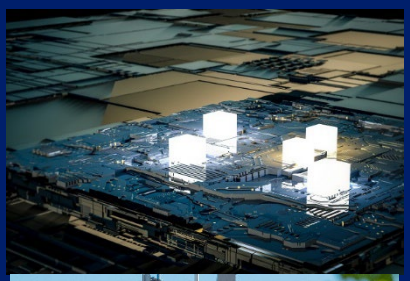
RF-35TC

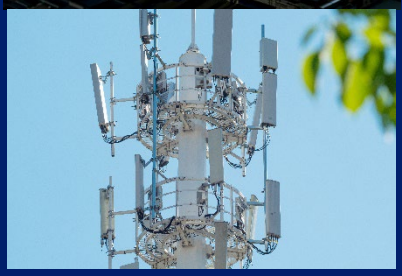
Thermally Conductive Low Loss Laminate

AGC
Your Dreams, Our Challenge

Benefits

- "Best in Class" Loss Tangent
- Exceptional Thermal Management
- Dk Stability Across a Broad Temperature Range
- Enhanced Antenna Gains/Efficiencies
- Excellent Adhesion to Very Low Profile copper





Applications

- Filters, Couplers & Power
- Amplifiers
- Antennas
- Satellites

RF-35TC offers a "best in class" low dissipation factor with high thermal conductivity. This material is best suited for high power applications where every 1/10th of a dB is critical and the PWB substrate is expected to diffuse heat away from both transmission lines and surface mount components such as transistors or capacitors. RF-35TC is a PTFE based, ceramic filled fiberglass substrate. It will not oxidize, yellow or show upward drift in dielectric constant and dissipation factor like its synthetic rubber (hydrocarbon) competitors.

The low Z axis CTE and temperature stable Dk are critical for both narrow band and broad band overlay couplers. The low X and Y CTE values are crucial for maintaining critical distances between trace elements in a printed filter. The extremely low Df of 0.0011 and high thermal conductivity are particularly suited for power amplifier applications.

RF-35TC bonds very well to low profile copper, further reducing insertion loss.

Like most material properties, there are many techniques for measuring thermal conductivity. Thermal conductivity measured on an unclad sample (no copper) offers the true thermal conductivity of the laminate. Measurements on a copper clad laminate typically yield higher values as the copper clad laminate offers the least thermal resistance at the interface between the laminate and measuring equipment.

When measured with or without copper cladding, RF-35TC has a state-of-the-art thermal conductivity. However, the low dissipation factor differentiates RF-35TC from the competition.

RF-35TC offers superior heat dissipation performance compared to competitive materials through a combination of exceptional thermal conductivity and "best in class" low dielectric loss.
