

TacLamplus

Ultra-thin base materials for mmWave applications

TacLamplus is a cost effective, non- reinforced microwave substrate that can be used to create very low loss structures both with single dielectric layers and multiple layers.

Exceptional copper foil adhesion allows small feature resolution and the unique composition of the dielectric facilitates clean laser ablation for micro via and component cavity formation.

The use of metal plate such as 1 mm copper helps maintain dimensional stability and provides a sound ground plane and heat sink

Benefits

- Laser Ablatable
- Sequential Multilayer
- Very Low Loss
- Low Moisture Absorption
- High Peel Strength
- Uniform & Consistent DK

Applications

- Automotive Radar
- mmWave Radios
- Power Amplifiers
